Profile Summary

AI/ML-focused Computer Science pre final year student(VIT Chennai) building full-stack, security-aware, and deep-learning-driven systems – from computer vision and supply-chain fraud models to LLM-powered copilots. Proficient in Python, React.js, FastAPI, AWS, and SQL/MongoDB, with hands-on experience across model training, secure system design, and API development.

Education

Bachelor of Technology CSE, VIT University Chennai

2024-2028

Higher Secondary Certificate, PSBB Senior Secondary School Chennai

2009-2024

Skills

- Programming Languages and Databases:** Python, Java, C, C++, JavaScript, MySQL, Oracle SQL, MongoDB
- Software Development:** Object-Oriented Programming (OOP), Software Development Life Cycle (SDLC), API Development, Full-Stack Development, Software Architecture Fundamentals, FastAPI, Server-Side Programming
- Web Development:** HTML, CSS, React.js, Node.js, REST APIs, Responsive Web Design, JSON Handling
- Artificial Intelligence, Machine Learning & Cloud:** Deep Learning, Classical ML, Model Explainability, Prompt Engineering & LLM Integration, Scikit-Learn, Pandas, NumPy, AWS
- Cybersecurity:** Phishing and Deepfake Detection, System Integrity Analysis, Linux Security Fundamentals, Security Monitoring
- Tools & Platforms:** Git, GitHub, VS Code, RStudio, MATLAB, Keil µVision, Verilog, Arduino IDE, ProjectLibre, StarUML
- Computer Science Fundamentals:** Operating Systems, Computer Networks, Data Structures & Algorithms
- Data Analytics, BI & Business Consulting:** Power BI, Data Visualization, Dashboard Development, Statistical Analysis, Data Pipelines, Structured and Unstructured Data Analysis, Market Research, Business Strategy Analysis
- Core Skills:** Problem Solving, Analytical Thinking, Debugging, Communication, Time Management, Team Coordination

Projects

TruthLens-AI

- Deepfake detection system using FastAPI backend with ResNet18-based classifier and Grad-CAM explainability, integrated with a Next.js frontend for image upload and visualization.

SmartSupplyGuardAI – AI-Driven Multi-Tier Supply Chain Fraud Detection

- AI-driven system for detecting fraud across multi-tier supply chains using machine learning models to flag anomalous transactions and supplier behavior.

AI Research Assistant (RAG)

- Local RAG research assistant using LangChain, Ollama, FAISS, and Streamlit for source-grounded question answering over PDF, DOCX, and TXT documents.

Campus Life Manager

- React.js-based web application aggregating official VIT portals into a unified dashboard using HTML, CSS, JavaScript, and REST APIs.

PathFinder-X

- A machine learning-based career guidance system that analyzes user profiles and resumes to recommend suitable career paths, industry domains, skill gaps, and relevant learning resources using predictive and rule-based matching techniques.

Superstore Sales Analysis

- Exploratory data analysis and visualization project on retail sales data, uncovering trends across regions, categories, and time to surface actionable business insights.

Gesture Live Vision Demo

- Real-time computer vision demo for live hand/gesture tracking and recognition, built for interactive, camera-driven applications.

Portfolio

- Developed an interactive portfolio with a responsive UI using HTML and CSS.
- Secure Mail Analyser
- Python-based system for spam and phishing email detection using heuristic-based analysis techniques.
- Rootkit Detection System
- Linux-based security monitoring tool for detecting kernel-level modifications using system integrity checks and audit mechanisms.
- Facial Recognition-Based Student Attendance System
- Developed a Python and MySQL-based attendance management system using facial recognition for automated student identification and attendance tracking.
- Baby Cry Monitoring System
- Designed an IoT-based monitoring system using ESP32 with integrated temperature and humidity sensors to detect and analyze baby cry patterns for real-time environmental and safety monitoring.

Research Papers

- A Comparative Study of Handcrafted and Deep Feature-Based Machine Learning and Deep Learning Models for Automated Classification of Gallbladder Diseases from Ultrasound Images – *Currently Working*
- Evaluating handcrafted and deep feature-based ML/DL models – ResNet, MobileNet, EfficientNet, DenseNet, SVM, XGBoost, Random Forest, KNN, and LightGBM – for automated classification of gallbladder diseases from ultrasound images.
- Quantum-Inspired Multimodal Cardiovascular Disease Risk Stratification Framework – *In Review*
- Developed a quantum-inspired multimodal cardiovascular disease risk stratification framework using ML/DL models (Logistic Regression, Random Forest, SVM, ResNet, MobileNet) with comparative evaluation for optimal predictive performance.

Achievements

- Branch sixth with a CGPA of 9.53 (Upto Year 2)
- Recipient of multiple scholarships, cash awards, proficiency prizes, and a rolling trophy for academic excellence
- Secured 97% in Class XII and 96.8% in Class X (CBSE Boards)
- Winner – 1st Place, Codeathon organised by Team Neo
- NPTEL Certification in Wildlife Ecology – Scored 100.0
- AWS Educate Machine Learning Foundations – Training Badge
- Participated in multiple hackathons such as SIH and EDITN

Clubs and Chapters

- Lead Editor, School of Computer Science Newsletter – VIT Chennai
- Core Board Member, Senior Consultant in Business Strategy Department – 180 Degrees Consulting, VIT Chennai
- Frontend Developer – NEXUS, VIT Chennai
- Programme Representative, CSE Cyber Security – VIT Chennai (2024–2025)
- Cultural Secretary – PSBB Senior Secondary School (2023–2024)
- Director, Interact Club, Rotary – PSBB Senior Secondary School (2023–24)
- Team Lead, Reverberations – PSBB Senior Secondary School Culturals (2023–24)

Internships

1. Intern, Infosys SpringBoard | June 2026 – August 2026 (Ongoing)
 - AI Recruitment and Talent Management Copilot – conceptualised and developed an AI-powered copilot using Python and large language models to streamline candidate screening, recruitment workflows, and talent management processes.
2. Intern, GP Strategies | May 2026 – June 2026
 - Worked as an AIML intern, conceptualised and deployed an intelligent CRM chatbot using Python and large language models to automate client interactions and streamline lead management.
